After having manually inserted approximately 30 cm of the net or casing that is to be loaded and having closed the access port the operator can carry out the start procedure.

The machine will then automatically carry out the loading of tubing up to the programmed level.

Only pneumatic input is used.

The structure of the machine comprises of tubes and stainless steel 304 panneling.

The machine described above is in accordance with and conforms to the European machine directive in the domain of safety, noise and hygiene.
