

AUTOMATIC WASHING MACHINE FOR SAUSAGES

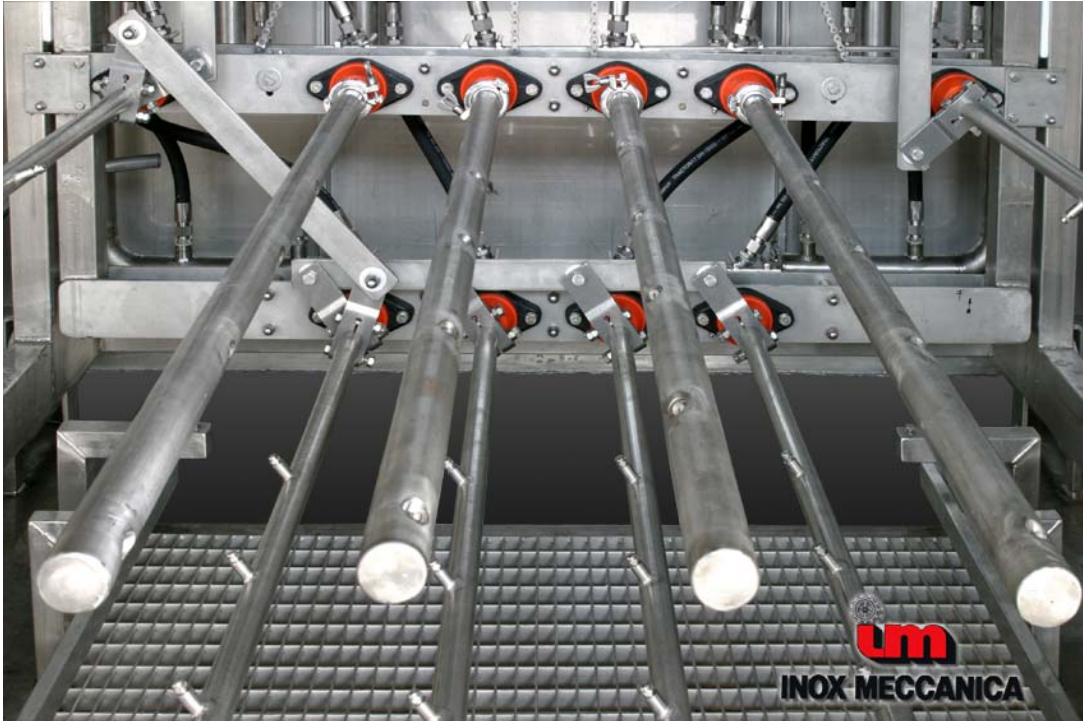

This machine has been studied for solving the problem of washing and cleaning of sausages on racks or on trees with railway.

This machine is mainly constituted by one tunnel with one door; the operator places the racks with sausages to be washed inside the washer.

- The structure of the washing tunnel is made of stainless steel aisi 304 panels which shall be assembled on site.
- The tunnel door has an automatic opening and closing and prevent the escape of water; when the doors are open, they allow the full accessibility to the trolleys.
- The washing plant consist on movable pipes placed on tunnel side and on special rod, easy to remove. When the trolley is placed inside the machine, washing rod move inside it and allow a perfect cleaning of all hanging sausages.
- All washing pipe can rotate of 90 or 360°, and move vertical and horizontal at the same time.
- Washing water, after use, is collected on machine bottom and directly discharged.
- Washing rod are controlled by a pump with stainless steel seals with a capacity of about 200 liters/min, that utilize clean water directly from the factory waterline. Pump control system installed directly on washer roof.

- Washing rods are controlled by a stainless steel pump with different features according to the sausages to be washed, that utilize clean water directly from the factory waterline.
- The wiring system is centralized in a stainless steel waterproof board with all the adjustable machine cycle data. Control push buttons (doors opening-closing, start-stop) are placed on a push button panel board near tunnel inlet door in order to help operator's use.
- The machine structure allows cleaning and sanitizing procedures to be carried out quickly and easily after each work shift.
- This machine is completely made of stainless steel AISI 304 and materials corrosion-proof.

Every washer is designed according to the customer's trolley, to the product and its disposition on trolleys. So machine dimensions will change according to the above informations.

Our company produces since twenty years washers like this model: this is a guarantee for our customers!

The machine described above is in accordance with and conforms to the European machine directive in the domain of safety, noise and hygiene.
