

## LOADER MOD. SE

This machine is designed for the automatic loading of elastic and non elastic net, synthetic casing or synthetic tubular casing, according to the accessories installed.

The loading takes place on stainless steel tubes with a gauge from 70 up to 180mm.

After having manually inserted approximately 30 cm of the net or casing to be loaded and having closed the access door, the operator can carry out the start procedure. The machine will then automatically carry out the loading of tube up to the programmed level.

The machine requires compressed air and electrical power supply.

The machine structure is constructed entirely in stainless steel AISI 304 and other anti-oxidant materials.

**The machine described above is in accordance with and conforms to the European machine directive in the domain of safety, noise and hygiene.**

### TECHNICAL DATA

Input pressure :	7 bar
Voltage:	220V – 50Hz
Elettric power:	0,15 Kw
Air consumption:	750 NL/min
